

These 5 prompts will change how you use AI

1. Improve your current resume (don't restart from zero)

"Analyze my resume for [job title]. Strengthen weak bullet points, align it with the job description, and highlight missing keywords. Also point out anything that may reduce my chances in ATS screening."

→ Add your resume + job description. Context = better results.

2. Turn job tasks into achievements

Rewrite these responsibilities into achievement-based bullet points. Use metrics and results. If I didn't provide numbers, ask me for them before rewriting.

→ The "ask me for them" part is key. It forces Claude to push back instead of inventing numbers.

3. Find the gaps before the recruiter does

Compare my resume to this job description. List the skills I'm missing. Tell me which ones I can reframe from existing experience and which ones I need to develop.

→ This is the most underrated prompt on this list. Most people skip it.

4. Keyword optimization (without stuffing)

Extract the top 20 keywords from this job description. Integrate them into my resume naturally. I don't want a list in the skills section.

→ ATS filters are real. This gets you past them without making your CV read like a keyword dump.

5. Write a LinkedIn About section that actually sounds like you

Write my LinkedIn About section. Use first person. No buzzwords. Focus on what problems I solve and for whom. Keep it under 250 words.

Write 3 versions: one formal, one conversational, one bold
