SUMMARY

Backend Developer with production experience building scalable, maintainable REST APIs in Java and Spring Boot. At AaoStays, independently designed and shipped a full property booking backend — JWT auth, RBAC, PostgreSQL schema optimization, Cloudinary media integration, and SMTP automation. Comfortable with layered architecture, ORM tuning, and transactional integrity. Focused on product engineering: writing clean, testable code that ships fast and scales reliably.

EXPERIENCE

AaoStays, **Backend Developer Intern**

Nov 2025 - Jan 2026

- Designed and implemented 20+ REST APIs supporting the full booking lifecycle — search, availability check, confirmation, and cancellation — serving concurrent users in production
- Built JWT-based authentication with Spring Security and fine-grained RBAC (user, admin), securing all API endpoints from unauthorized access
- Designed normalized PostgreSQL schema with composite indexing on high-query columns, reducing average booking search query time by ~35%
- Integrated Cloudinary API for property image upload/retrieval and SMTP for automated booking confirmation emails, cutting manual admin effort significantly
- Optimized Hibernate fetch strategies (lazy vs eager loading), eliminating N+1 query issues and reducing unnecessary DB calls by ~40%
- Implemented clean layered architecture (Controller → Service → Repository) across the entire backend, improving maintainability and enabling independent testability
- Delivered production-grade platform currently used by real property owners — designed, built, and deployed independently

EDUCATION

Sree Dattha Institute of Engineering & Science

B.Tech • **Electrical & Electronics Engineering**

CGPA: 7.01

LICENSES & CERTIFICATIONS

Java Full Stack Development

Qspiders • Issued 2025

SKILLS

Java • SQL • JavaScript • Spring Boot • Spring Security • Hibernate (JPA) • REST APIs • JWT Authentication • Flyway • MapStruct
