

KOTTALA RISHI

Software Engineering Intern | Java | Spring Boot | REST APIs | Backend Development
Hyderabad, India | +91 9951949353 | kottalarishi4@gmail.com | github.com/kottalarishi | linkedin.com/in/kottalarishi

SUMMARY

Backend developer with production experience building scalable REST APIs in Java and Spring Boot. At AaoStays, independently designed and shipped a full property booking backend — JWT auth, RBAC, PostgreSQL schema optimization, Cloudinary integration, and SMTP automation. Strong foundation in OOP, data structures, and software engineering best practices. Curious about AI-powered tools for profiling, debugging, and workflow automation. Eager to contribute to real-world products at scale.

TECHNICAL SKILLS

Languages:	Java (primary), Python (familiar), SQL, JavaScript
Backend:	Spring Boot, Spring Security, Hibernate (JPA), REST APIs, JWT Auth, Flyway, MapStruct
Databases:	PostgreSQL, MySQL — schema design, indexing, query optimization, ACID transactions
Tools & AI:	Git, GitHub, Postman, Maven, Cloudinary, SMTP — open to AI-powered profiling & debugging tools
Frontend:	React.js, HTML, CSS
Concepts:	OOP, DSA, Clean Architecture, RBAC, REST Design, DB Normalization, System Design

EXPERIENCE

Backend Developer Intern — AaoStays

Nov 2025 – Jan 2026

- Developed and maintained 20+ REST APIs covering the full booking lifecycle (search, availability, confirmation, cancellation) — production-deployed, serving real users
- Built JWT-based authentication with Spring Security and RBAC (user/admin), securing all endpoints; enterprise-grade security setup
- Designed normalized PostgreSQL schema with composite indexing on high-query columns, reducing booking search latency by ~35%
- Optimized Hibernate fetch strategies (lazy vs eager loading), eliminating N+1 issues and cutting unnecessary DB calls by ~40%
- Integrated Cloudinary for media management and SMTP for automated transactional emails; troubleshoot and debugged integration issues independently
- Delivered entire platform solo — schema to deployment — demonstrating resourcefulness and ownership

PROJECTS

Finance Dashboard System

Spring Boot, Spring Security, JWT, PostgreSQL, Flyway, MapStruct

- Secure finance backend with ADMIN / ANALYST / VIEWER RBAC, enforcing method-level permissions via @PreAuthorize
- Stateless JWT auth with custom UserDetails, JWT filter chain, BCrypt hashing — production-grade security
- Filtering APIs (date, category, type) and dashboard APIs (income, expenses, net balance, monthly trends)
- Flyway for version-controlled DB migrations with seeded admin user — standard product engineering practice

AaoStays — Property Booking Platform

Spring Boot, Spring Security, JWT, PostgreSQL, Hibernate, Cloudinary

- End-to-end Airbnb-style backend: property listing, availability search, booking management — production-deployed
- Relational schema with normalized tables, FK constraints, indexed query paths for performant lookups at scale

URL Shortener Service

Spring Boot, PostgreSQL, Base62 Encoding

- URL shortening with Base62 encoding and indexed schema for near-constant-time redirect resolution
- Redirect API with validation, expiry checking, and error handling — designed for horizontal scaling (bit.ly model)

EDUCATION

B.Tech — Electrical & Electronics Engineering

Sree Dattha Institute of Engineering & Science | 2024 | CGPA: 7.01

CERTIFICATIONS

Java Full Stack Development (Java + React) — Qspiders, 2025
